

Eflare™ news *safety in a flash*

BE SEEN - BE SAFE Safety and emergency beacon visible for more than 1km at night!

Eflares now in Australian Ambulances

The ambulance service is now taking up the use of Eflares to help optimise the safety of their crews.

They are now using the very popular HZ530 red & blue emergency services safety beacon which is already widely used by both the police and fire sectors of the emergency services. All users have a high regard for its power and performance with a durability of 40 hours.

Promoting to the Traffic

EmergSolutions on the main Canterbury Road at Vermont, in Melbourne's eastern suburbs, has seriously taken on the job of selling Eflares.

The company's external street signage now boasts a large image of an Eflare - taken from our Marketing Resources CD.

The emergency systems specialist says it has created great interest and is generating sales.

Eflares Impress Customs

The Australian Customs are now using Eflare TF610 beacons which have a floatation collar and three settings: white flash, steady-on light or torch.

This innovative product is not only a life-saver for private boat users but is creating much interest in many marine applications around the world.

Optional Colours Proving Popular

Eflare's range of colour variations are working well in a variety of industrial applications - where advantageous pricing helps distributors make the sale.

Beacons like the HZ530 blue/white dual flash, the HZ530 green/white dual flash, the HZ520 in a steady-on red and the HZ520 steady-on blue are all solutions to various application niches in emergency, mining and aviation. These three are now available at very special prices. Contact us for details.

Eflares a Vital Part

Pacfire has been awarded the contract for the CFS in South Australia to supply stowage equipment to fit-out their new fire fighting vehicles for the next 3 years. **Eflare HZ530RB with bases are very much part of the deal.**
